RE: Spill in a creek near Chamberlain Mfg. in Clinton

On August 6 1983, I observed spilled material in a creek North of the Chamberlain Mfg. wastewater treatment plant. The material appeared to be greenish in color.

I was informed that the spill was reported to Steve Hoambrecker of IDWAWM Region 6 office by Robert Tonn, Superintendent of Clinton Wastewater Treatment Plant on August 4, 1983. Mr. Tonn stated that the waste is sludge from Chamberlain Mfg. wastewater treatment plant. If so, this material would be a hazardous waste based on F006 listing.
